

Alcanivorax sp. CCB-CTB327

Colony morphology	<p>White; 1-2 mm; circular; entire; raised; glistening; transparent</p> 	
Gram-stain	<p>Positive rod</p>	
Isolation medium	<p>Marine agar (MA); Marine Broth (MB)</p>	
Growth condition	<p>Aerobic;pH7;28±2°C; 24-48hrs</p>	
Sampling date, location, source	<p>12 May 2016; CEMACS Teluk Bahang, N05°28.100' E100°12.011'; Seawater</p>	
Biochemistry/ Physiology	<p>No</p>	
16s rRNA gene analysis(EzBioCloud/N CBI)	<p>Top-hit taxon</p>	<p><i>Alcanivorax dieselolei</i></p>
	<p>Top-hit strain</p>	<p>B-5</p>
	<p>Similarity (%)</p>	<p>99.85%</p>
	<p>Top-hit taxonomy</p>	<p>Bacteria; Proteobacteria; Gammaproteobacteria: Oceanospirillales; Alcanivoraceae; <i>Alcanivorax</i></p>
Publication	<p>No</p>	
Application	<p>No</p>	
Isolated by	<p>Diyana Tarmizi</p>	
Risk group	<p>1</p>
