

## *Nocardioopsis* sp. CCB-KSK141

### Colony morphology

White aerial mycelium; circular; undulate; crateriform; dry; non-pigmented; opaque; medium colony size

### Gram-stain

Positive, filamentous bacterium

### Isolation medium

Starch Casein Agar (SCA) + 50% Artificial sea water (ASW)

### Growth condition

Aerobic; pH7; 28±2°C; 7-14 days

### Sampling date, location, source

12 May 2014; Kuala Sala, Kedah (100.3546°E, 5.9737°N); Sediment

### Biochemistry/ Physiology

No

### 16s rRNA gene analysis(EzBioCloud/N CBI)

Top-hit taxon *Nocardioopsis alba*

Top-hit strain DSM 43377(T)

Similarity (%) 100.00

Top-hit taxonomy Bacteria;Actinobacteria;Actinobacteria\_c;Streptosporangiales;Nocardioopsaceae;Nocardioopsis

### Publication

No

### Application

No

### Isolated by

Farizah Hanim bt Lat

### Risk group

2

### Additional information
