

***Streptomyces* sp. CCB-KSK131**

Colony morphology

Grey white aerial mycelium; circular; entire; flat; dry; opaque; small colony size

Gram-stain

Positive, filamentous bacterium

Isolation medium

Starch Casein Agar (SCA) + 50% Artificial sea water (ASW)

Growth condition

Aerobic; pH 7; 28±2°C; 7-14 days

Sampling date, location, source

12 May 2014; Kuala Sala, Kedah (100.3546°E, 5.9737°N); Sediment

Biochemistry/ Physiology

No

16s rRNA gene analysis (EzBioCloud/N CBI)

Top-hit taxon *Streptomyces xiamenensis*

Top-hit strain MCCC 1A01550(T)

Similarity (%) 99.69

Top-hit taxonomy Bacteria; Actinobacteria; Actinobacteria_c; Streptomycetales; Streptomycetaceae; Streptomyces

Publication

No

Application

No

Isolated by

Farizah Hanim bt Lat

Risk group

2

Additional information
